

SAFE COMMAND™

DAYCARE/PRE-SCHOOL RAPID EMERGENCY NOTIFICATION SYSTEM

How do you contact parents in the event of emergency? School Closure? Emergency Relocation? How long will it take to contact all parents? Will your staff waste critical time on the phone calling parents when their resources should be used elsewhere?

Working with such organizations as Northern Illinois University, Will County Emergency Management Agency, I-KAN Regional Office of Education, Kankakee County Sheriff's Department, Will County Regional Office of Education and New Lenox Police Department, Xstream Mobile Solutions (XSM) has the proven experience, reliability and state-of-the-art infrastructure required for today's emergency notification needs. In addition, XSM products are being used in over 75 schools grades K-12.

This same technical backbone and infrastructure that XSM has been using for years with municipal and county governments is now available for use in daycares and pre-schools that understand the best and most efficient way to keep parents informed of critical situations. (**Note: All text messages sent must be of an emergency nature**)

You can now have the ability to contact large groups of people in seconds, which is very important when seconds count. Simply access your database (parents sign themselves up), type your message and hit "send". In less than one minute, you can contact more people than you would be able to contact in an hour using regular phone lines. According to NACCRA, the annual average cost for a four year old in daycare in Illinois is \$7802. That means that for less than 3% of your fee for one student annually, you will be able to contact your entire database of parents and/or guardians for a whole year in the event of an emergency! This is something the parents of the children you are in charge of would really like to see!

This cost is low because emergency notifications are made via text messaging. Text messaging has been proven to be the most reliable and affordable way to contact large numbers of people lightning fast. Since over 90% of the adult population carries cell phones, it is by far the best way to contact people quickly and efficiently. Another product, XSM's **C-Mail Connect**, gives you the ability to send emails of an emergency or non-emergency nature. While this program regularly sells for \$100, your organization can purchase it for \$50 (one time fee) with the purchase of **SAFE COMMAND™**. Isn't it time to advance your notification needs into the 21st Century?
